Quicksand

AUTOMATED SANDBLAST PRODUCTION SYSTEM

The QuickSand Automated Sandblast Production System was created by Allen Datagraph Systems, Inc. to meet the image production and sandblast needs of the monument and memorial industry.

QuickSand is for companies engaged in sandblast production of designs in granite, marble, glass, wood, solid-surface materials and more. ADSI has applied its innovative motion control technologies to efficiently automate the sandblast process. The QuickSand system includes the automated sandblast curtain and ADSI's exclusive Blast Ready software with easy to use job set-up templates.

A unique feature of the QuickSand Automated Sandblast Production System is the optimization of the blast direction to only the intended areas on the stencil, resulting in increased productivity of up to 50% - and savings up to 50% in materials costs. The nozzle is automatically directed through the desired image path and the depth of impression is controlled through management of the blast duration time, avoiding "stencil burn". The circular nozzle rotation process is adjustable allowing creation of the desired edge and line definition.

The QuickSand System installs easily into existing sandblast rooms that are already equipped with media recovery and delivery systems.

For all your sandblast needs – the QuickSand Automated Sandblast Production System from Allen Datagraph Systems, Inc. is the best choice to maximize your capability, productivity and profitability.

Model Number	SB-408	SB-410	SB-412
Size	6'x 8"	6'x 10"	6'x 12"
Blast Area	50"x 84"	50"x 108"	50"x 132"
Speed	10 Inches / Sec		
Weight	650lbs.		
Network Connectivity	RS-232
